

## **WordPress theme installation instructions for Partners**

### **1. Install WordPress (if not yet installed)**

To install WordPress follow the instructions here:

[wordpress.org/support/article/how-to-install-wordpress](https://wordpress.org/support/article/how-to-install-wordpress)

### **2. Copy files**

Copy the contents of "themes", "plugins", and "uploads" directories from our filepack into the respective directories inside "wp-content" folder in your WordPress installation.

### **3. Import the database contents.**

3.1. Make sure that the table prefixes in the WordPress configuration are the same as the table prefixes in the DB export file (they should be "xyz\_"). In "wp-config.php" file find the line that looks like this:

```
$table_prefix = 'wp_';
```

And change it to the following:

```
$table_prefix = 'xyz_';
```

3.2. WordPress stores the address of your site in the database. In the DB export you received a placeholder is used, and you need to replace it with the actual address of your site. Using any editor that has search and replace capabilities, replace the following strings (in that particular order!):

```
<-- REPLACE_ADDRESS -->/wp  
<-- REPLACE_ADDRESS -->
```

...with the address of your website.

### **3.3. Import the database.**
